

# nodepthtext

Adapt small texts,  
with empty depth.

Version 0.1.0 - 11/11/2024

Cédric Pierquet  
c pierquet - at - outlook . fr  
<https://github.com/cpierquet/nodepthtext>

A sample text to show letters with depth.

A sample text to show letters without depth.

A text to show letters with depth.

A text to show letters without depth.

A text to show letters without depth and rescaling.

**A text to show letters with depth (inconsolata).**

**A text to show letters w/o depth (inconsolata).**

**A text w/o depth and scaling (inconsolata).**

# 1 Introduction

## 1.1 Loading, useful packages

In order to load `nodepthtext`, simply use:

```
\usepackage{nodepthtext}
```

Loaded packages are `graphicx`, `xstring` and `calc`.

## 1.2 Usage, limitations

The purpose of this package is to provide command, based on `\raisebox` and `\resizebox`, to locally remove depth of characters.

- the code read characters one by one;
- whenever a character (letter or punctuation...) with depth is processed, this character is raised and resized in order to match others characters;
- if Lua<sup>L</sup>ATE<sub>X</sub> is used, accentuated characters can be given normally (uft8), but with pdf<sup>L</sup>ATE<sub>X</sub>, they must be given within L<sup>A</sup>T<sub>E</sub>X syntax.

So, for accentuated letters (because `xstring` processes the characters), please load `inputenc` and `fontenc` with corrects options if pdf<sup>L</sup>ATE<sub>X</sub> is used (not necessary with Lua<sup>L</sup>ATE<sub>X</sub>).

```
%example with pdflatex preamble
\usepackage[T1]{fontenc}
\usepackage[utf8]{inputenc}
```

## 1.3 History

0.1.0: Initial version

## 2 The macro

The main macro is `\nodepth`.

```
\nodepth[scale]{text}
```

The optional argument, within `[...]`, can modify scale for modified characters (`0.8` by default). The mandatory argument, within `{...}`, is a small text to process (beware of accentuated characters). In order to work with sizes and fonts, the macro needs to be given within the group of defined size/font!

## 3 Samples

### 3.1 Wih custom size

```
%normal version, with depth of letters  
\LARGE\ttfamily A text to show letters with depth.  
  
%nodepth version, with removing depth and resizing  
\LARGE\ttfamily\nodepth{A text to show letters without depth.}\\\  
\LARGE\ttfamily\nodepth[0.7]{A text to show letters without depth and scaling.}
```

A text to show letters with depth.  
A text to show letters without depth.  
A text to show letters without depth and scaling.

### 3.2 With custom font, and accents

```
%use inconsolata font (with pdfLaTeX)  
\newcommand\fontIZ{\fontencoding{T1}\fontfamily{zi4}\fontseries{sb}\selectfont}
```

```
%normal version, with depth of letters and accents (inconsolata font)  
\large\fontIZ A text to show depth and a word with accents, météo.\\\  
  
%nodepth version, with removing depth and resizing and accents...  
\large\fontIZ\nodepth{Quote text w/o depth and a word with accents, m\'{e}t\'{e}o.}\\\  
\large\fontIZ\nodepth[0.7]{Quote text w/o depth, scaling and a word with accents,  
m\'{e}t\'{e}o.}
```

A text to show depth and a word with accents, météo.

Quote text w/o depth and a word with accents, météo.  
Quote text w/o depth, scaling and a word with accents, météo.

## 4 The code

```
